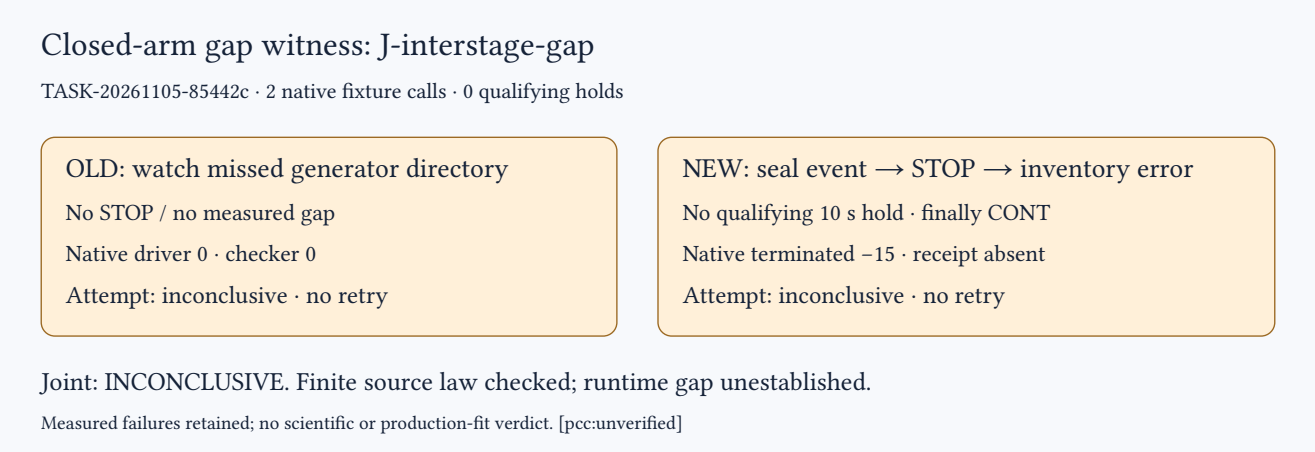
Independent closed-arm interstage review

TASK-20261105-85442c • J-interstage-gap • 2026-11-05

Joint verdict: inconclusive. Two native fixture calls; no qualifying isolated 10-second monotonic hold. No retry. All observations remain [pcc:unverified].



OLD observation. The ancestor inotify watch missed generator directory creation. No seal event or STOP occurred. Native driver/checker both exited 0. This ordinary completion does not test old5-second refusal during the required gap.

NEW observation. A retained watcher revision discovered existing subdirectories. It caught seal close, STOPped the identity-bound direct driver and reached the code after its plain-T/TracerPid0 loop; stopped-status raw bytes were not persisted before failure. The next children inventory read failed because the proc task path was unavailable. No outstanding-arm confirmation or 10-second hold was completed. Finally CONT resumed the same PID; the original native Popen wait timed out after5s, then group termination and actual wait returned −15. Native receipt absent; all known PIDs absent at later inspection.

Static source finding. Source publications OLD af8a54211bcd6f0503c3d58d159289bff6a023ce and NEW 964579a78b488fcfe8040837f5af138b5cd0be3c differ only in observer receive choice and its manifest entry within59 keys. Other57 and load_custody AST exact. Framing retains one finite absolute deadline, never reset per byte. Fixture stage30 + grace2 +5 gives37 seconds. Runtime joint remains unestablished.

Budget / custody. Pair ended at343.142s from original dispatch41436.978451904; process inspection407.444s. Shared focused420s and whole600s never reset. Exactly2 calls, zero scientific draws. Full logs, partials, helper versions, raw/source files and editable report source are embedded losslessly in checks.json. No production-fit, mathematical or advantage verdict.

Scope / reading. Literal plan SHA256 0e0064440b785e2be8bc9c869f4917557b88471e70d0e4e370499edb7e8ae31f. Read AGENTS, validator, literature-first, research-visuals, source, obstruction and retained prior failure. External Linux manuals unavailable locally; network prohibited. Prior-round TASK-591a0a helper boilerplate read; no current sibling report read. Final attestation and actual native independence output are retained.

Next action: Coordinator preserves the inconclusive outcome and decides any new authorization. Source law alone cannot substitute for the missed runtime witness. [pcc:unverified]
