Complete classical reference validation

EXP-ECDLP-ca93ac / RUN-ECDLP-fc6e86 / GOAL-ECDLP-e70832

Canonical public certificates accepted by the independent checker

RUN-ECDLP-fc6e86; one fixed 1,536-target cohort, repeated A/A. Unit: certificates.
Deterministic exact inventories; these passes are not independent population samples.

Native parent trials	1 requested; 1 output_validated; 0 failed; 0 timed out
Reference certificates	1536 per pass; 1,536 distinct public targets
Domains	48 checked; 24 target-bearing; 64 targets each
Original equation checks	3072; same targets checked in both passes
Known-scalar positive checks	384
Reference mutation rejections	3072
Status guard controls	23 registered enum positives; 54 malformed/unknown negatives; all passed
Frozen candidate coverage	36782 traces; 73236 cells; 3042690 words
Accepted candidate claim events	1380 dependent field events; 460 claimed cells
Distinct candidate witnesses	160 curve-target-scalar tuples; 0 field disagreements

Both 1,536-target passes have identical certificate bytes. Independent original-equation, known-scalar, mutation and status-schema controls passed. The complete frozen prefix was scanned with exact full-payload hashes, no malformed records or partial tails. The reference proof was sealed before candidate files were opened.

The 1,380 claim events are dependent word/scalar/array views; 160 distinct tuples are an inventory, not independent samples. The candidate production prefix is incomplete. No recovery-rate denominator, performance advantage or scaling estimate follows. Classical reference: HAC 3.56; independent Jacobian checker from SEC 1 formulas.

Native driver/checker/outer exits 0; actual outer elapsed 41.013711seconds is unqualified operational telemetry. Same allocated shared workspace, 2 CPU / 4 GiB, no clock or counter comparison. Source fe720d01; launch 51bae157. Full hashes/commands, input bindings and limitations are in report.md and observations.json. Native receipt 54265d5e…1381cb; audit logical SHA 4a62c16f…34f3e6. Data stored with uncached fullGET verification, native receipt unchanged.

The initial sparse-profile entry refusal preceded any trial. Prescribed materialization and checkpointgate succeeded before this one physical parent. All adverse source reviews remain preserved. Trusted PCC execution standing remains unverified. Next: independent result review, then a separately frozen matched comparison and independently sampled cohort. [pcc:unverified]
