Completed n44 polynomial-basis input 03

Observation only. The fixed input fresh-n44-poly-03 completed. All 42 artifact hashes and original request bytes were verified. The fresh exact solution count is 0. The degree-four producer reports contains-one and emits no certificate. This is a producer observation, not an independently certified upper bound or a new lower bound.

Fifteen of the original 32 continuation inputs are terminal, with eight certified LFD at least 5 results. Seventeen inputs remain unfinished. No degree-six result or population claim follows. Shared-host timing is telemetry only. Raw paths and verification scope are in readback.json; the frozen protocol is ../../panel-protocol-v3.json.

Job semaev-panel-n44-poly03-v3-20261029-2045, UID e34ae4bb-7a34-4ccf-a138-d0ce8db3c936, completed at 2026-10-29T20:47:29Z. Publication verification is recorded in publication.json.
