Classical ECDLP: direct response + nine named lead families
CPU/GPU; no factor-base pipeline; no quantum
Per-lead contracts
Question / object / controls / metrics / outcomes
Known controls and scoped obstructions
Respect hypotheses; preserve failed candidates
Missing constructions
Total bit circuit + exact rewrite / locator / decoder
Public constructor and composition argument
Development checks completed
3 tiny curves; 13,731 reference assertions
Point states only; no speed measurement
requires implementation + admission
instrument qualification only
Future admitted finite discovery
Frozen grammar; exact tagged boundaries
Counterexamples retained
freeze surviving construction
Future frozen confirmation
24 fresh curves; 192 random targets
Separate correctness edges; cluster by curve
Later claim assessment
Full costs + matched baselines + independent reconstruction
Novelty and asymptotics remain unverified
