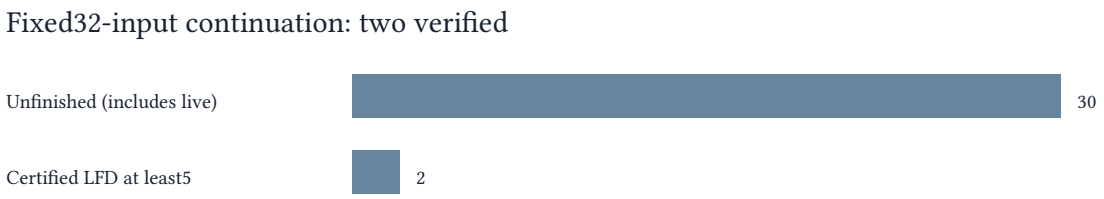
Second verified remote n42 input



Original input fresh-n42-rand-04 is certified LFD at least5: the original independent checker accepts codimension at least22065 at degree4, and the fresh exact Boolean solution count is0. All42 artifact hashes were verified after S3 download, including the344101184-byte retained certificate. This completes the second of32 fixed continuation inputs. The two verified inputs are n42-rand03 and n42-rand04;30 remain, including the live n43-poly00 job.

Certificate SHA256: e09408def99b82cc943bed7df687a33d5dc2f8879ea4bf48662ba070e127af7b.

The certificate is publicly archived inside semaev-panel-worker-20261029.tar.gz at requests/fresh-n42-rand-04/retained.bin. Public archive GET/hash was verified in runtime/panel-publication.json. Raw S3 paths and verification receipt are in readback.json; checker and count transcripts are retained here.

This is a named-instance lower bound, not a degree-six result or population claim. Original input identity and frozen parameters are in request.json. Protocol: ../../panel-protocol-v2.json. No complete32-input export is emitted while30 inputs remain. The separate64GiB degree-five search remains active.
