Verified remote panel pilot

Original input fresh-n42-rand-03 is certified LFD at least5: the original independent checker accepts codimension at least22065 at degree4, and the fresh exact Boolean solution count is0. All42 artifact hashes were verified after full S3 download, including the344101184-byte retained certificate. This completes1 of32 fixed continuation inputs;31 remain. The failed v1 wrapper attempt remains recorded separately and is not an additional sample.

Certificate SHA256: b7385138fc7b6305c46b6a4a6d8f603feb3af760bfe9e48108710e57e0676d23.

The certificate is publicly archived inside semaev-panel-worker-20261029.tar.gz at requests/fresh-n42-rand-03/retained.bin. Public archive full GET/hash was verified in runtime/panel-publication.json. Exact job results and S3 paths are in readback.json. Checker transcript and count output accompany this report.

This is a named-instance lower bound, not a population statement or degree-six result. Original input parameters and prior identity are in request.json. No full32-input export is emitted before remaining outcomes are known. The separate64GiB degree-five search continues.
