Certified n44 polynomial-subspace input 00

The original independent checker accepts a degree-four certificate with codimension lower bound 9131. Exact enumeration gives 6 solutions. The strict inequality 9131 > 6 establishes LFD at least 5 for this named input. It establishes no degree-six lower bound or upper bound.

All 47 recorded artifact hashes and the original frozen request bytes were verified after download. The 172783904-byte certificate, checker transcript, exact-count output, environment and commands are retained in the complete evidence archive. Publication verification is recorded separately in publication.json.

This is the twelfth completed input of the original 32-input continuation, with seven inputs establishing LFD at least 5. Twenty inputs remain unfinished. Protocol: ../../panel-protocol-v3.json. No population-frequency or complete-panel claim is made.

Job semaev-panel-n44-poly00-v3-20261029-2006, UID 23658093-1091-482a-9b39-fd854dc3252b, completed at 2026-10-29T20:37:22Z. Node-local controls and all scientific steps completed successfully. Shared-host elapsed times are telemetry only; no performance comparison is made. Exact paths and hashes are in readback.json and result.json.
