Completed n44 polynomial-basis input 01

Observation only. The fixed input fresh-n44-poly-01 completed. All 42 artifact hashes and original request bytes were verified. The fresh exact solution count is 0. The degree-four producer reports contains-one and emits no certificate. This is a producer observation, not an independently certified upper bound or a new lower bound.

Thirteen of the original 32 continuation inputs are terminal, with seven certified LFD at least 5 results. Nineteen inputs remain unfinished. No degree-six result or population claim follows. Shared-host timing is telemetry only. Raw paths and verification scope are in readback.json; the frozen protocol is ../../panel-protocol-v3.json.

Job semaev-panel-n44-poly01-v3-20261029-2038, UID 92097f50-5491-4b20-ac2f-e578c4eb1ba6, completed at 2026-10-29T20:40:22Z. Publication verification is recorded in publication.json.

> fresh-n44-poly-01: controls pass; exact count 0

> Producer contains-one ⟶ no certificate ⟶ no new LFD bound
