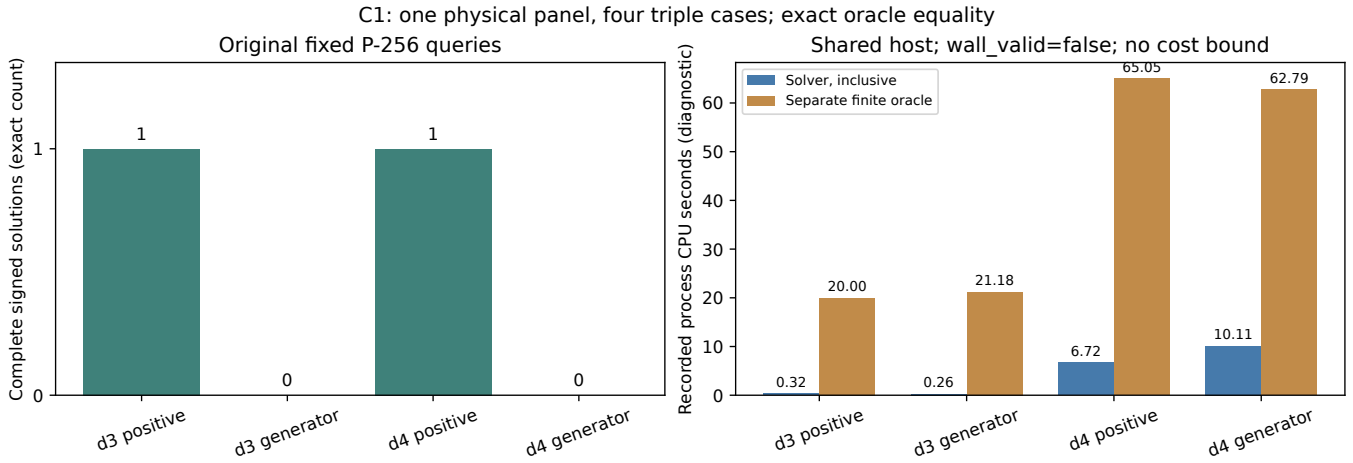
C1 fixed P-256 run: observations

29 October 2026 · c1-fixed-panel-4f8ab9 · one physical panel

This descriptive report records the unchanged fixed F1 inputs and complete finite oracle checks. It is not an independent claim review or a speedup claim.



Case	States	Signed solutions	Oracle
Depth3 positive	1	1	matched
Depth3 generator	0	0	matched
Depth4 positive	1	1	matched
Depth4 generator	0	0	matched

All five arity-four partitions [1,1,1,1], [2,1,1], [2,2], [3,1], [4] each had one signed solution. Nonseparable and corrupted-certificate controls passed. The historical corruption case removes the solution set; no additional native root/sign mutation is implied. All triple coordinate partitions were checked; the nonzero native triple states here are distinct-coordinate states.

The process exited0, no timeout, source unchanged: seven cases complete, four complete triple cases, three control cases, zero unknown. The public generator's zero solution count applies only to the fixed declared base/query. The positives are constructed controls, not unknown-DLP recoveries.

Frozen execution

Exact curve, generator, fibre terminals and targets: original research/p256_factor_base_parallel_20261026/tracks/f1/inputs.json. Seed2026102601, maximum operator dimension560, all multiplicity strata; one compute process/thread;2GiB memory and3600s watchdog. Admission used the unchanged real S3 gate, committed source/protocol/release and owner lease.

Source: 6164ec00d419cbe43520fbdda19f85f6bbde44cf. Protocol: da415e25dd20cae3d33abe90b1c6c9b6500063cfd7f7ad6dd78c97c49e7399d8. Release commit: 9374c43ed538a91b62e3edc2b51d9f1ec1a6ccee. Raw data snapshot: e925f22610577ceae34ff0e9cff59b3b40de277a.

Resources and limits

Diagnostic process wall321.665s; CPU user317.619s and system2.956s; peak process RSS123,777,024 bytes. Shared host, wall_valid=false; no calibrated timing or complete-cost claim. Solver-total events include their inner phases; the separate oracle must not be hidden or double-counted. FLINT internal field operation counts remain unavailable. The export's two method cells share one physical process and one diagnostic cost record; do not add shared counts.

Raw cases, journals and exact command: ../../runs/c1-fixed-panel-4f8ab9/. The export verifies with file hashes and0 findings. Analysis, supervision, source locks and the literature/source review are in the parent study. Reports/summaries add only labeled arithmetic on retained values. No failed or censored scientific case occurred. No official scientific status is promoted; model identity and independent scientific review remain unverified.
