Certified n44 random input 01

The original independent checker accepts the degree-four certificate for fresh-n44-rand-01 with codimension lower bound 31780. Exact enumeration gives 4 solutions. The strict inequality 31780 > 4 establishes LFD at least 5 for this named input. No degree-six lower bound or upper bound follows.

All 47 recorded artifact hashes and the frozen request bytes were verified after download. All recorded steps returned zero without timeout; node-local controls passed. The certificate contains 597544256 bytes, SHA256 5c74665d9f92f19127dfb326bc4576896e51c39daa021f163ac97a7ea08b14b1. Readback and publication receipts preserve the complete evidence archive and verification.

This is the eighteenth completed input of the original 32-input continuation, including eleven inputs with certified LFD at least 5. Fourteen remain unfinished. Retries are not additional draws; no population-frequency or full-panel conclusion is made. The original protocol and scientific sources are unchanged. Shared-host elapsed times are telemetry only.

Job semaev-panel-n44-rand01-v3-20261030-0035, UID 9feb6c7f-3cd3-44df-9a35-083258b4db96, completed at 2026-10-30T01:23:03Z. Protocol: ../../panel-protocol-v3.json. The mathematical certificate argument is unchanged; this report extends the named-instance evidence.

Frozen n44 random input 01

Independent D4 checker: codimension at least 31780

Exact counter: 4 solutions ⟶ strict inequality ⟶ LFD ≥ 5

18 / 32 inputs complete; 14 unfinished; no degree-six claim
