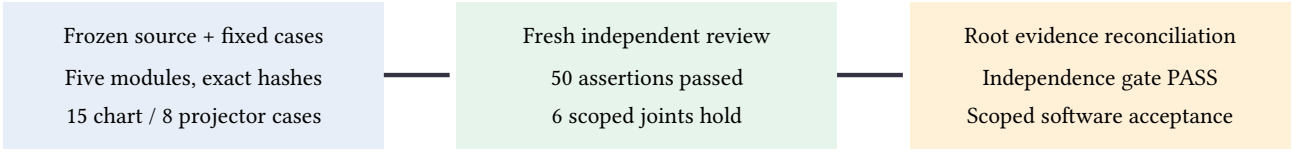
# Complete signed interval charts

**Independent software decision · DEC-20261030-2b276b**

The five archived modules passed fresh independent software review. One invocation completed 50 assertions with no failures or timeouts: 15 chart cases, eight projector cases, 26 corruptions and the final source-hash assertion. All six assigned review joints hold at the fixed software scope. Root reconciled the raw records and passed the native independence gate.



## Verified behavior

The cases cover k=0..5, finite and identity targets, normalized pole shapes, repeated roots, both signs, common factors, two-torsion, characteristic-five multiplicities, wrapped intervals and target support outside the interval. Expected impossible charts and invalid projectors pass by rejection. A separate polynomial/group/Hasse-series oracle verifies coefficient norm identities, exact factor products and local orders.

The producer passed 84 assertions in its separate suite. These counts are distinct harness units and are neither added nor used to rank evidence strength. The case named finite_three_common actually has B=0; finite_four supplies the nonzero-A/nonzero-B common-factor check.

## Inference boundary

The constructor uses a supplied checked relation; root recovery uses supplied valid idempotents. This acceptance concerns fixed software fidelity. Universal rational descent/chart completeness, witness-search costs and solving degree remain separate obligations. Named algorithm events and the conditional projector recovery estimate are not measured total work or a performance comparison. No solver instance, scientific census, benchmark or remote job ran.

## Independent custody

The reviewer did not read producer tests/results/proof/README or source-note derivations. Five source hashes matched before and after. All four sealed reviewer artifacts and the test/contract hashes reconciled at root. The actual native gate passed. Serving model, effective effort and capacity remain unauthenticated under the prospective inference amendment. A cancelled filename-navigation command was retained and was not a test invocation.

## Evidence and next step

Source: 1a944ab5677a4e0b1059d1afd965cdd1b87acdf6. Snapshot: 0afa2a96cbc878269f1e277ad41a03db862f518c. Review: TASK-20261030-0c09df. Ledger: TASK-20261030-0bc116. report-inputs.json binds exact input hashes, gate output and publication custody; the sealed independent-results.json contains complete raw assertions.

Next independently review and implement rationality alternatives, then integrate certified SAT and compare identical complete projected signed outputs with all setup, search, reconstruction and certificate checking charged. The present implementation retains the full Euler rationality predicate. Canonical lead/frontier sources remain unchanged because this decision changes no universal proof, degree or cost status.

This pipeline diagram replaces a performance plot because these fixed receipts contain no comparable timing measurements.
