V5 readiness composition

DEC-20261104-d59957 · TASK-20261104-b846bb · 4 November 2026

Unverified assertions throughout; no signed CI/PCC standing.

Published v5 source/public controls and tested nested cleanup provide completed software components; one final-custody seam requires a two-file correction before fresh admission. [pcc:unverified]

Observation

J-source-authority holds; J-public-workload holds; J-custody-lifecycle breaks at static exit reconciliation, while cleanup holds at the declared fixed-software scope. Independent review: TASK-20261104-448845. Final seven hashes and current59source match; unchanged native independence passes with the external7603 plan pin and finalbaadec attestation. [pcc:unverified]

Fixed F11/F23 r≤29:16setups,16singles,20traces/intents,24cells; two BSGS answers7 for two targets, all6cells. Static48:216setups,345600singles,36864traces/intents,73728cells. These are source/unit counts, not a new scientific cohort. [pcc:unverified]

29same-path source/public/process mutations refuse;7structural and7bounded-child controls retain partials. Independent18lifecycle controls:6active watchdog/expiry cases,12adopted service/selected-worker waits;12helperfailure/race cases,12actual worker waits. Earlier producer six2-second coverage failures remain failures. [pcc:unverified]

Comparison: final custody exit seam

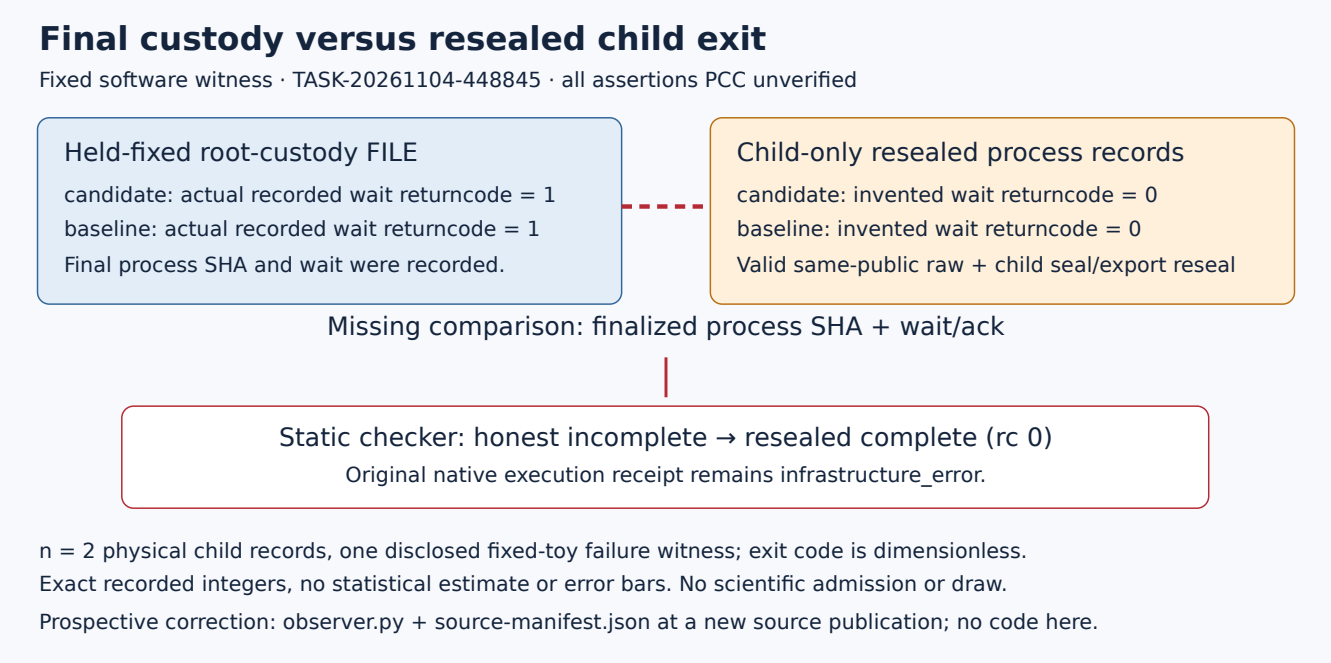

Figure: one disclosed fixed-toy failure witness, n=2physical child records. Dimensionless exit codes1 versus child-resealed0; exact integers, no uncertainty estimate. Original native receipt stays infrastructure_error. [pcc:unverified]

The unchanged static checker accepts honest incomplete, then accepts complete after child-only resealing with fixed root custody. load_custody verifies launch facts but omits finalized process_sha256/ driver_reported_wait reconciliation. This is a static replay break, not admission of failed science by unchanged native execute_trial. [pcc:unverified]

Decision and next technical step

Revise software readiness. Goal remains ACTIVE; H-ECDLP-6674c9 remains specified. No scientific transition or knowledge promotion. Evidence strength: retained fixed-software counterexample, with independent positive controls and scoped cleanup evidence; no new solver outcome. [pcc:unverified]

Inference

Prospectively correct only v5 observer.py plus source-manifest.json at a NEW source publication. Reconcile each expected arm’s process hash, actual wait/ack and closure acknowledgment against the held-fixed finalized record. Honest nonzero incomplete stays accepted. Keep other14core files, exact59keyset, native/check argv, sampling and mathematical pins unchanged. New evidence fits a separate small capsule; keep original publication, delivery and history. No v6 namespace or historical raw copy is required. [pcc:unverified]

An extra bound host wrapper makes the native source map exceed59, violating unchanged observer exact equality with config. Subprocess delegation also changes checker argv. Do not weaken source closure or spoof argv. A later source commit may revise the existing software path under new prospective ownership; results and previous receipts remain immutable. [pcc:unverified]

Ranked work after this composition

1. Freeze and independently review only the custody delta. Rebuild honest incomplete and genuine same-public raw/reseal controls under NEW source/native pins. Require closure-specific refusal, not old-source mismatch. No implementation or allocation here. [pcc:unverified]
2. After accepted repair, freeze/admit the first fresh48descriptive solver cohort with original law/all6cells and union218prior+48current=266exclusions, adding earlier new cohorts. Require actual preapproval, approval/archive, ready selector, benchrec and checkpoint before /run. [pcc:unverified]
3. Keep two further desired48cohorts unfiled for genuine later bounded sessions under1newEXP/session. Cost/counter/clock qualification stays separate from descriptive outcomes. [pcc:unverified]

Limitation and archival boundary

Composition runs0science/fixtures/draws/newIDEA/EXP/cloud. Production admission, full48RSS/storage fit and qualified performance remain future work. Trusted root observer/kernel facts and held-fixed FILE are the boundary; no hostile sameUID isolation or cryptographic historical PID proof. Preserve partials, failed earlier controls, actual ordinary/adopted waits and unknown timestamps. [pcc:unverified]

Review sys.path/decoding/path/queue-diff/Typst errors and root metadata guard failure remain retained. Initial composition displays lacked persisted read timestamps and some truncated; subsequent full byte events do not assert semantic reading of every embedded payload. Root-supplied GET/PDF/physical proofs are read as identified receipts; no worker remote readback. [pcc:unverified]

Source remains774-based until the next boundary. Five math pins/original host verifier and canonical study/knowledge graph sources remain unchanged: software readiness only, no overall lead verdict. PCC remains unverified. [pcc:unverified]

Supporting immutable records

Review publication:1fc83815e4ca4ed80935bcbe9a386673774d5c6a. Source publication:cfb10b89cdef32257e681cf915b9b80c5c7b1cc7. BATCH-e9f035/reviews/TASK-20261104-448845 report/source-review/checks/read-attestation; sourcearchive TASK-fcd2f6 receipt; observations contains exact hashes, full editable sources and command capsule. [pcc:unverified]

Root alone registers actual review/composition metadata before finalarchive TASK-20261104-abea09 and binds retirement/reversal/operations evidence. DEC/goal remain proposals until that isolated archive. PR2590 stays open/unmerged/autooff. [pcc:unverified]
