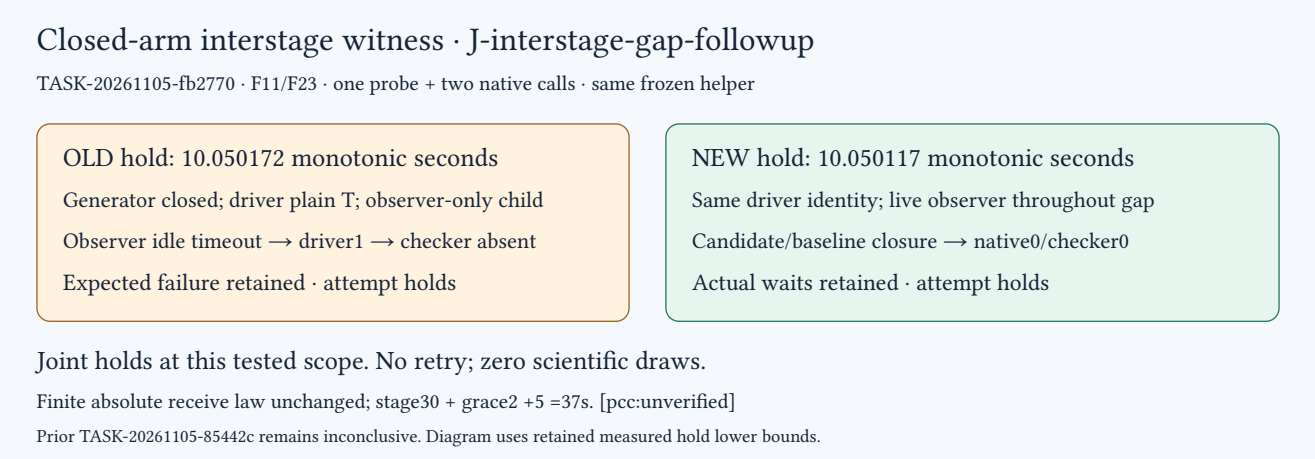
Independent interstage follow-up

TASK-20261105-fb2770 • J-interstage-gap-followup • 2026-11-05

Joint: holds at disclosed F11/F23 fixed-fixture scope. Both actual closed-generator gaps were isolated and measured. Prior854 remains inconclusive and unwaived. All findings remain [pcc:unverified].



Measured observation. OLD plain-T hold lower bound: 10.050172389 seconds. NEW: 10.050116758 seconds. Raw driver T/stat/status/cmdline was persisted before inventory. Complete numeric proc PPid scans found only the observer child; generator-only observations, seal and wait proved closed generator/no open arm. Hold clocks began after checks. End snapshots were captured still T before CONT. Driver/native identities and TracerPid0 remained bound; NEW observer stayed alive.

Matched outcome. OLD raw observer TimeoutError, native infrastructure_error, driver1, checker absent. First observed observer zombie was 5.053479s after seal (sampled upper bound, spacing about0.25s). NEW completed native output_validated, driver0/checker0 and generator/candidate/baseline closure. Result members, seals, embedded59 source captures and original OS waits were checked. Original Popen.wait returned; known processes absent. No deadline cleanup kill.

Source and instrument. Only observer receive choice and matching manifest entry differ; other57 and load_custody AST exact. One finite absolute frame deadline, never reset per byte; stage30+grace2+5 =37s. Seal close follows CUSTODY.closed reply. One fixed non-EC probe checked existing nested-directory discovery and seal close, plus proc/self parser. It does not prove arbitrary unwatched fast-close detection. Actual controls retain their own seal events. One frozen helper file/hash for both cases; no source/time mocks or tracer.

Budget / evidence. Pair ended at271.507731s from original43942.861707589 dispatch, within shared420; whole600 packaging time in checks.json. One probe, exactly2 native calls, no scientific draws or retries. Original nativeouter120 deadlines retained. Lossless capsule contains all new raw/helper/probe/source/editable files and member hashes. This joint gives no production-fit, mathematical or advantage verdict.

Reading / limits. Same independent reviewer continued as allowed; prior854fullwork known, no current sibling report read. AGENTS, validator, literature-first, research-visuals, original source/obstruction and frozen plan read. External Linux manuals unavailable locally; network forbidden. Plan SHA25654da6b02e0443fcb23b023d551a2cdaff13c0e74e9828d7cdb1100185711868d. Root retains publication/PCC/archive authority. Native declaration check is not signed PCC standing. [pcc:unverified]
