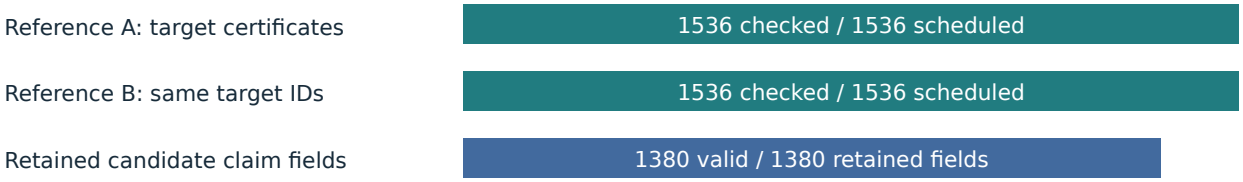
Finite correctness results retained

DEC-20261106-f6c4b2 · EXP-ECDLP-ca93ac · RUN-ECDLP-fc6e86

Finite inventories independently checked

RUN-ECDLP-fc6e86 · TASK-20261106-409935 · exact counts; fixed inputs



A/B share 1536 unique targets on 24 target-bearing domains; all 48 domains checked.

Candidate fields depend on one frozen prefix: 460 claimed cells → 160 distinct tuples.

0 field disagreements; 3072 scalar mutations rejected; 384 known-scalar controls.

Administrative retention only · main sync UNMET · PCC unverified · no cost comparison

Bar lengths count records. Retained fields are not candidate attempts or independent scientific samples.

Decision: administrative synthesis. Retain the completed fixed-input certificates and independent J1 review. No EV/KN record or hypothesis/goal status transition is made. Official promotion remains withheld: current-main synchronization is UNMET and trusted PCC standing is unverified.

Observation. The sole native parent is output_validated. Fresh A/B processes each produced1536 identical canonical certificates. Independent affine/Montgomery-ladder arithmetic checked3072 equations,3072 scalar mutations and384 known-scalar controls. Full frozen coverage:36782 traces,73236 cells and3042690 words. All1380 retained fields are valid, representing160 distinct curve/target/scalar tuples in460 claimed cells, with0 field disagreements. The producer’s23 positive and54 negative status controls passed; independent review checked the recorded controls and assessed source shape cases.

Comparison. A/B repeat the same1536 target IDs; they are not3072 independent instances. Counts compare exact inventories with frozen required inventories. The1380 fields are dependent word/scalar/array views. Neither160 tuples nor retained fields define a candidate recovery-rate denominator. No isolated clock/counter or candidate/reference cost comparison was admitted.

Inference. Independent result review TASK-20261106-409935 holds only for complete finite reference correctness and exact R52 retained-prefix classification. Native independence returned0; unified review had0 findings. Reviewer used no producer arithmetic and no solver/backend replay. Its disclosed checker corrections and both attempts were charged to the original600s cap; final accounting565.86s. Only recompute-process memory was measured.

Limitation and next action. Two read-only main fetches failed with unresolved deltas; no main merge occurred. Source fe720d01 and all frozen results remain unchanged. Old EXP356403 attempts, format failure and cap deviations are preserved. No performance, exponent, novelty, security, population or PCC promotion follows. Finish native090 custody; repair fetch/integrity and synchronize main before official evidence promotion. Any matched isolated cost comparison requires a separate prospective protocol. PR2590 stays open/unmerged, auto-merge off.

Sources: run report; export check0findings; TASK409 report/checks/review; snapshot TASKff6301. Reviewer publication33bdc452. No EV allocated. Exact identities and scope are in DEC/report.md. Earlier run report: ../run-RUN-ECDLP-fc6e86/report.pdf. Canonical frontier map and sealed run/review diagrams checked and unchanged: no new scientific frontier claim. [pcc:unverified]
