Same-cohort recovery: operational stop

EXP-ECDLP-356403 · RUN-ECDLP-52de64 · closed native attempt

RUN-52de64: closed operational reserve stop

Generator complete
48 curves / same public bundle

Candidate incomplete
free_byte_reserve / waited −15

Baseline stopped
BSGS output / checker absent

Native infrastructure_error · driver 1 · checker absent · outer waited 3

Generated public cohort	48 curves; 1,536 targets; 382,464 scheduled jobs
Native status	infrastructure_error; driver1; checker absent; outer3
Candidate / baseline	Both free_byte_reserve; return −15; actual waits recorded
Complete prefix rows	Setups 216; singles 345600; intents 36783
Other complete prefix rows	Traces 36782; cells 73236
Malformed / partial tail	0 malformed rows; no partial trailing JSONL line in all5 streams
Logical raw inventory	61 files; 2,447,366,254 bytes
Current outer elapsed	708.594167736 seconds, unqualified operational timing
Original first outer elapsed	239.009645033 seconds, separate physical attempt and scope

Public cohort SHA and canonical job-plan SHA match the original frozen bundle exactly. The public cohort remains48 unique curves across attempts. Generation is separately paid in each physical attempt. The observer interstage repair survived the generator-to-candidate transition; this attempt later stopped on its unchanged free-byte reserve.

The complete JSONL prefix is a retained partial artifact. RECOVERED and public-check booleans in those records are self-reported and have NOT received the missing independent baseline/checker validation. Cells, methods and blindings are dependent views; curve remains the population unit. No success/failure rate is inferred from missing data. No mathematical, statistical, asymptotic or performance verdict follows.

This is the current count-only benchmark artifact before run-record publication. The full run report follows published records. Original first-attempt failure, max2 history and all raw bytes remain preserved. This report approves no third attempt or new sampling. Native receipts are unchanged; all derived arithmetic is labeled complete-prefix record counting.
