Bounded interstage observer accepted

DEC-20261105-c4c30c · Technical component only

The unchanged fixed F11/F23 control now supplies the missing matched interstage gap witness. Identical helper bytes were used for both cases. OLD held the direct driver in plain kernel T for10.050172389s and showed the actual5-second idle receive failure, native driver1/checker absent. NEW held for10.050116758s, kept its observer alive and completed native driver0/checker0, full closure and actual OS waits.

Matched fixed interstage gap: same helper, two native calls

OLD · 10.050172 s plain T

Idle 5 s timeout · driver1 · no checker

NEW · 10.050117 s plain T

Observer alive · native driver0 / checker0

Stage30 s · grace2 s · outer120 s · no ptrace · actual OS waits

Fixed F11/F23 operational witness only. Source57 other keys and load_custody AST unchanged.

Stage30s/grace2s/outer120s; exactly2 native calls,1 nonEC instrumentation probe,0 retries and0 science. Whole458.468s of600 and pair271.508s of420. Native final independence0 against literal54da6b02 plan with actualattestation; prior854uses its own0e006444 plan and remains INCONCLUSIVE.

NEW uses the existing finite frozen stage-derived allowance for closed-arm receive (fixture30+2+5=37s). One absolute monotonic frame deadline,1MiB frame cap and no per-byte resets remain. Only observer.py and its manifest entry changed; all other57source keys and accepted load_custody AST remain exact. Source publication:964579a78b488fcfe8040837f5af138b5cd0be3c. Prior open-stage/framing acceptance is inherited only within its original scope; no controls were rerun here.

Implementation355.074s less than 600 withzero controls. Source38archive776.926s greater than 600, repairdesign875.159s greater than 600 and firstreport363.623s greater than 360 remain UNMET/unwaived. The wrong first38receipt is retained as a procedural deviation; correct declaredR1a9dc01a/directR22dfa8dbf/ native20bindings remain authoritative. Prior854helperfailures are retained; no old result or cap is reset.

The first full48 attempt stays infrastructure_error, without paired solver measurements. Original max1/no-retry history remains preserved. This acceptance promotes no mathematical, novelty, asymptotic, performance or hypothesis/goal status. Knowledge promotion is not applicable. Scientific graphs remain unchanged. All PCC claims remain UNVERIFIED. Prospective same-EXP recovery/native admission is a separate next step under original05:53UTC cap; no scientific run is approved here.
