Observer deadline component acceptance

Scoped Coordinator composition · DEC-20261104-50e1ea · [pcc:unverified]

Proposal: accept only the observer absolute framed-IPC deadline and frozen stage-derived quiet allowance on source af8a542. Root must archive DEC/goal before the transition becomes official. Goal active and hypothesis specified remain unchanged.

Scoped observer-deadline evidence composition

Separate rounds; old inconclusive outcomes and clocks are preserved. [pcc:unverified]

996070: partial controls
ordinary / short / 13 socket / 18 limit
Joint stays INCONCLUSIVE

58aa74: traced native pass
no confirmed plain-T witness
Joint stays INCONCLUSIVE

591a0a: untraced witness
native closure / liveness / waits
Only missing control supplied

One untraced control: measured stopped lower bound

125.100102 s (n=1; conservative monotonic bracket; required at least125 s)

start32168.879704715 → end32293.979806343; end snapshot precedes CONT

Derived observer quiet lower bound ≥125.100102 s >120 s

From verified unchanged no-progress/no-IPC source + observed liveness; no internal clock invented.

Proposed DEC50e1ea: accept this technical component → FIRST ONE fresh48 admission

No scientific transition, performance bound, production-fit verdict or new control run.

Observation

996070 retained ordinary validated, truthful short expiry, 13 socket cases and 18 effective-limit checks. Its long helper failed before STOP; its owned joint stays **inconclusive**. 58aa74 completed native output/checker/waits under ptrace but lacked confirmed plain T; its joint stays **inconclusive**. 591a0a supplied only the untraced missing witness; J-untraced-longquiet **holds**. [pcc:unverified]

Actual 591 baseline PID 84378 / start 3216806 / parent 84372 and observer 84374 / start 3216487 retained identity; 65 actual kernel snapshots recorded no tracers. Conservative monotonic start 32168.879704715 and end 32293.979806343 yield **125.10010162799881 seconds**, with the end evidence collected while still T before CONT. Native supervisor, candidate, baseline and observer actual waits returned 0; native driver / checker 0 and output_validated. [pcc:unverified]

Comparison and inference

The measured stopped lower bound exceeds the required 125 seconds. Observer quiet greater than 120 seconds is **causally derived**, using this measured interval, observed liveness and the verified unchanged sequential no-progress/no-observer-traffic source path. No direct observer-internal clock was measured. The marker does not establish sleep entry or duration. [pcc:unverified]

Original partial checks plus the new physical witness meet this technical component scope. Only observer.py/source-manifest changed; the other57 and accepted load_custody AST remain fixed. Separate native independence commands used each round’s own literal 078d / ea07 / 02b881 external plan and its own final read-attestation; all returned 0. This procedural check does not relabel either old joint. [pcc:unverified]

Preserved limits

Separate control clocks: 996070: 147.382623 / 420 seconds (3 calls);58aa74: 256.133724 / 300 seconds (1 call);591a0a: 228.900092 / 420 seconds (1 call). Their workloads differ. Prior producer 198.681973 seconds exceeded 180 and remains unwaived; current producer 155.924606633 / 420 seconds is separate. 591 conservative whole-task bound 743.178773 / 1200 seconds uses earlier root claim UTC; exact dispatch monotonic was not recorded. Sparse kernel samples are not continuous tracing. No aggregate-RSS, mathematical, performance, production-fit, novelty or attack-cost conclusion follows. All empirical statements remain PCCunverified.

Next technical action

After isolated root archival acceptance, freeze/admit **FIRST ONE fresh48** in this genuine session. Preserve original 48 / 216 setups / 345600 singles / 36864 traces / 73728 cells / 8 arms / all 6 cells / 64 targets x8 blindings, literal 266 exclusions, separately paid generator and working BSGS, and two physical rows. Actual preapproval approvable:true → standing approval archive → ready selector → claim/checkpoint → /run with OUTER benchrec. Other two cohorts remain unfiled for genuine later sessions; no new fit/production-positive/backend prerequisite.

Provenance and unchanged graphs

Inputs: BATCH-da4dc5 implementation/report.md and reviews 996070, 58aa74, 591a0a source-review/checks/final read-attestations; full exact hashes/native commands/source snapshots in observations.json. PCC 7c8f32 standing remains unverified. Exact claim-file SHA and native ledger canonical-record digest are distinct fields. Scientific mechanism/proof/frontier graphs remain unchanged: no supported mathematical mechanism or bound changed. No controls, science, EXP, IDEA, draw or nonce were created by this composition.
