Third attempt: original lease ended the native pipeline

Frozen same48 generation COMPLETE → candidate prefix RETAINED

05:52:45 claim expiry → native NULL return codes → outer actual wait3

Engine completion, baseline, BSGS, checker and paired export ABSENT

Third physical attempt: closed-run supplement

This additive supplement leaves the published0542 report unchanged. Three physical attempts share ONE frozen48-curve public cohort; they are not96 or144 independent curves. The third attempt ended at the original lease with native `claim_expired`, driver/check return codes NULL. Actual outer wait returned3. No candidate process exit code or child wait is invented.

| Attempt | Native status | Unqualified outer seconds | Observed stop/missing scope |

| --- | --- | --- | --- |

| RUN0ade3c | infrastructure_error; driver1/checkNULL | 239.009645033 | Observer between-stage gap; generator complete; candidate barrier failed; baseline absent. |

| RUN52de64 | infrastructure_error; driver1/checkNULL | 708.594167736 | Free-byte-reserve stopped candidate and baseline; no validated paired output. |

| RUN45e1b5 | claim_expired; driverNULL/checkNULL | 628.256287271 | Original claim expiry05:52:45; no process-completion/summary, baseline/checker/export. |

Outer elapsed times are operational costs, separate from solver timings or matched comparisons. SourceAF8 scoped observer acceptance preceded the first attempt; later repair964579a78b488fcfe8040837f5af138b5cd0be3c changed only observer/manifest for the later attempts. All59 runtime source hashes matched the frozen third plan.

Third planned workload and retained complete prefixes

| Record stream | Planned | Actual complete prefix |

| --- | --- | --- |

| setups | 216 | 212 |

| singles | 345600 | 345600 |

| intents | 36864 | 34361 |

| traces | 36864 | 34360 |

| cells | 73728 | 58704 |

All five streams have zero malformed records and zero partial trailing lines in the closed scan. Generation completed48 curves/1536 targets/382464 scheduled jobs. These are record-count observations; incomplete confirmation prefixes do not supply a population recovery rate. Eight calibration arms, six dependent cells,64 targets×8 blindings, two physical solver rows and1536 planned BSGS solves remained unchanged. Candidate engine completion/summary, independent host/baseline/BSGS verification and typed export are absent. Any retained RECOVERED/public-check labels are producer self reports; this supplement does not validate them.

Timing, custody and resources

Native start 2026-11-05T05:42:21.882811+00:00; native finish 2026-11-05T05:52:45.095791+00:00; original claim expiry 2026-11-05T05:52:45+00:00; production absolute cap2026-11-05T05:53:00Z. Maximum three cumulative production attempts is exhausted; no fourth attempt is authorized. The finite arithmetic review has its own separate clock and does not extend production. Generator start 2026-11-05T05:42:33.299094+00:00; finish 2026-11-05T05:46:08.748180+00:00, return0 with an actual waited0 acknowledgment. Candidate completion and baseline/checker timing are unavailable.

No replacement draw or new cohort.

Whole native watchdog7200s; each stage3600s/grace2s; native memory12288MiB and stage memory6442450944B; document67108864B/input100663296B/generation268435456B/file2147483648B/tree2415919104B/log16777216B/free reserve134217728B unchanged. Tree monitoring is per arm. These limits assert no fit or runtime guarantee.

Native environment: platform linux; Python 3.12.14 (main, Aug 25 2026, 14:00:49) [Clang 22.1.3]. Actual host record: {"cpu": "INTEL(R) XEON(R) PLATINUM 8573C", "cpus_online": 5, "hostname": "bed07a19751a", "isolation": "unstated", "platform": "Linux-6.18.57-x86_64-with-glibc2.41"}. CPU model is reported only if present in that record; native environment does not independently record it.

Exact native command:

["python3", "-B", "harness/classical_ecdlp_controlled_followup_v5/driver.py", "production", "--repo-root", "/tmp/classical-ecdlp-recovery-20261105", "--out", "/tmp/classical-ecdlp-recovery-20261105/experiments/EXP-ECDLP-356403/runs/RUN-ECDLP-45e1b5", "--trial-plan", "experiments/EXP-ECDLP-356403/trial-plan.json", "--trial-id", "roomy-recovery-full48", "--config", "experiments/EXP-ECDLP-356403/recovery-v3/production-config.json"]

Retained37 logical raw files2159041804B. Every raw identity/pointer and all13 large full uncached S3 GET proofs are retained in the source sidecar/root publication receipt; native receipt is immutable. Native terminal cf archive bound all67 actual Git identities without skips. Original executor contract/missing73-success expectations and failed source remain preserved. The two earlier inconclusive reviews, source/archive overruns, and priorR45 admin609.376064825>600 remain unmet and unwaived. This supplement adds no hypothesis/goal/algorithm/performance/complexity/novelty verdict.

Independent finite-witness review

Independent reviewer retained 1380 valid dependent claimed-field checks from460 word,460 scalar and460 array events, representing160 distinct (curve,target,scalar) witnesses in the supplied second-attempt prefix. All1380 plus-one mutation controls rejected; no invalid/undefined/parser/tail/domain gaps were reported. The recorded arithmetic work was5333 public evaluations including844 scalar multiplications; request-inclusive bound8953 below500000. Whole reviewer591.523852475s and peak384068KiB were within600s/4GiB. Root verified unchanged input hashes/static independent affine arithmetic and viewed the final PDF. Original native independence returned1 because redundant scalar verdict shadows the correct per-joint mapping. Root-owned lossless projection removes only that redundant field and returned0; this is PROJECTION-ONLY, not an original native pass. Original review task is therefore FAILED for its operational native-format gate, UNMET/unwaived; finite arithmetic findings remain observations with this qualification. Original7 bytes and all original J1/J2/J3 holds declarations remain unchanged. No production completion, population rate or algorithm/performance conclusion follows.

Review scope and actual independence/caps/coverage are qualified by the final root handoff. Finite witness correctness is distinct from native production completion, independent baseline measurement and population recovery rate.
