Benchmark progress: crypto-autoresearcher

From bench.record/v1 records in Git; raw data in S3 by SHA-256. Derived numbers are labelled derived.

Records: open 0, measured 8, invalid 1, censored 0. Headline unit S: group operations / sqrt(n); the ECDLP cost unit, every phase priced.

Series in unit bytes: gain vs first record (derived, %)

Series in unit count: gain vs first record (derived, %)

Series in unit fmul: gain vs first record (derived, %)

Series summary

problem • metric	unit	first	latest	gain vs first	value/ref	pts
ic:prime-field-cold-solvers • cancellation_first	fmul	813,356	813,356	?	?	1

Every value is quoted from the record it names, in that record’s unit. Percentages and ratios under ’derived’ are computed here from those values and are not measurements. Series in different units are never compared.
