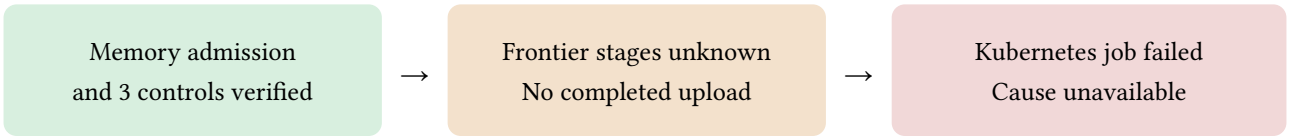
Bounded lift attempt 001

Observations only. One selected n47 random00 attempt was requested; one cloud job failed, zero frontier computations completed, and no degree-six certificate was obtained. This is not a mathematical refutation.

Job semaev-n47-rand00-d5-bounded-20261030-0210 (UID f97c413c-9678-48c6-8cad-ac0dc0e320eb) was submitted at 02:16:37 UTC, its container started at 02:36:46 UTC, and Kubernetes recorded failure at 02:46:42 UTC on 2026-10-30. The reason is BackoffLimitExceeded; the underlying cause is unknown because the pod was unavailable on follow-up. No OOM or Spot-interruption diagnosis is supported.

Recorded allocation: 112 GiB pod, 96 GiB child cap, two CPUs, six-hour deadline and zero automatic retries. Node: ip-10-84-87-128.us-east-2.compute.internal. Recorded Python: 3.9.25. Timing is operational telemetry only. The pinned worker source is commit 86913bf765d63b36464ab4d6a311f341e107fb8d; portable producer SHA256 228ff400e0a2e6d6b24baaa5d5d3eaf9f9a82601441add0f25e83ba90481ea24.

All three startup controls reproduced expected certificate bytes and were accepted by the independent checker. Initial memory admission and request, manifest and driver identity passed. Only 29 startup artifacts were uploaded. No completed frontier D4 recheck, fresh solution count, D5 producer result or D5 certificate is available. The exact stage at interruption is unknown.

Reproduction inputs and exact command: ../../runtime/bounded-lift-job-001.json and ../../runtime/bounded-lift-request-002.json. Frozen protocol: ../../bounded-lift-protocol-001.json. Terminal observation: ../../runs/bounded-lift-terminal-001.json. Control transcripts and hashes: ../../validation/bounded-lift-cloud-startup-001/verification.json. The request retains the original n47 random00 seed and parameters; this is not a new independent sample.


The diagram shows retained evidence rather than a runtime comparison. No lower or upper bound follows from this failed attempt. The original one-attempt protocol is exhausted; any continuation requires its own recorded identity and must preserve this outcome.
