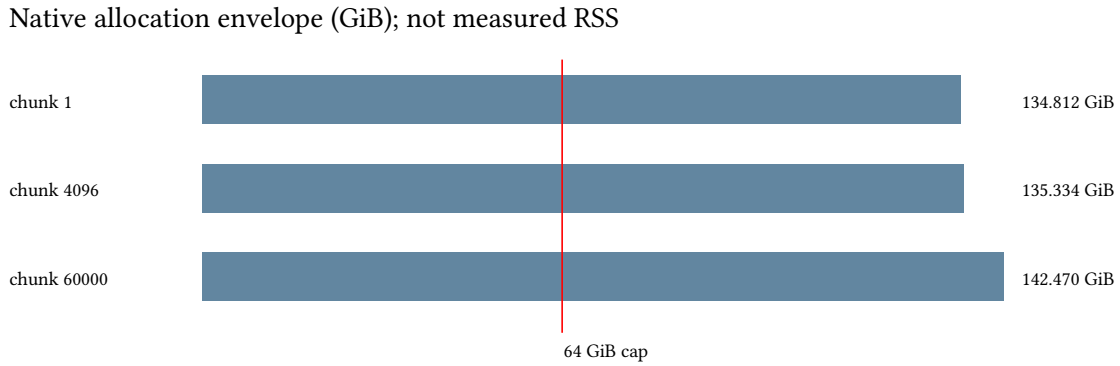
n47 random00: degree-five allocation envelope

Both enumerations agree: 126,387 border coordinates, 187,583 working coordinates.



Chunk 1: 144,752,755,295 bytes (134.812 GiB).

Chunk 4096: 145,314,027,461 bytes (135.334 GiB).

Chunk 60000: 152,976,386,232 bytes (142.470 GiB).

Exact frozen source formula, not measured RSS or minimum memory. Even the smallest batch exceeds the observed host total memory. No closure or new LFD bound.

Next: separately qualify larger-memory placement or a smaller representation. Preserve the active campaign and original checker.

Evidence: raw/result.json, native-envelope-plan-001.json, native-envelope-protocol-001.json. Certificate SHA256: 3bdad807113e43ec41ac6e9edcb2a282ffa486c7a694eba0dd3e0e9b0fa5162f
