Completed n43 polynomial-basis input 02

fresh-n43-poly-02: controls pass; exact count 0

Producer contains-one → no certificate → no new LFD bound

Observation only. The fixed input fresh-n43-poly-02 completed. All 42 artifact hashes and original request bytes were verified. The fresh exact solution count is 0. The degree-four producer reports contains-one and emits no certificate. This is a producer observation, not an independently certified upper bound or a new lower bound.

Five of the 32 continuation inputs are now terminal: two n42 inputs certify LFD at least 5, n43 input 01 has accepted codimension 4 equal to count 4, and n43 inputs 00 and 02 have no accepted certificate. Twenty-seven inputs remain unfinished, including the active distinct retry of input 03. No degree-six result or population claim follows. Shared-host timing is telemetry only. Raw paths and verification scope are in readback.json; the frozen protocol is ../../panel-protocol-v3.json.

Job semaev-panel-n43-poly02-v3-20261029-1725 completed at 2026-10-29T17:50:23Z. The figure is an evidence-flow diagram because this report contains one outcome.
