Certified n44 random input 00

The original independent checker accepts the degree-four certificate for fresh-n44-rand-00 with codimension lower bound 31780. Exact enumeration gives 4 solutions. The strict inequality 31780 > 4 establishes LFD at least 5 for this named input. No degree-six lower bound or upper bound follows.

All 47 recorded artifact hashes and the frozen request bytes were verified after download. All recorded steps returned zero without timeout; node-local controls passed. The certificate contains 597544256 bytes, SHA256 b3a8e958580f2bd34665cbeed875869d4b69a4dc9d5c5837b4258a415ff86df3. Readback and publication receipts preserve the complete evidence archive and verification.

This is the nineteenth completed input of the original 32-input continuation, including twelve inputs with certified LFD at least 5. Thirteen remain unfinished. Retries are not additional draws; no population-frequency or full-panel conclusion is made. The original protocol and scientific sources are unchanged. Shared-host elapsed times are telemetry only.

Job semaev-panel-n44-rand00-v3-20261030-0035, UID 20bdcb85-9947-4478-bdcb-a47e274f0501, completed at 2026-10-30T01:25:06Z. Protocol: ../../panel-protocol-v3.json. The mathematical certificate argument is unchanged; this report extends the named-instance evidence.

Frozen n44 random input 00

Independent D4 checker: codimension at least 31780

Exact counter: 4 solutions ⟶ strict inequality ⟶ LFD ≥ 5

19 / 32 inputs complete; 13 unfinished; no degree-six claim
